1 Installation

1.1 On Windows

On windows, when I finished the installation with **mongodb-win32-x86_64-2008plus-latest-signed.msi**, the installation directory **C:\Program Files\MongoDB\Server\3.2\bin** is no added to the system variable PATH. I added the directory path to PATH manually, then I am able to run **mongod** and **mongo** in cmd console.

Making a new directory somewhere and run

```
int main(int argc, char ** argv) {
        printf("Hello world!\n");
        return 0;
}
```
